PROFESSIONAL OBJECTIVE

Java Backend Developer with 2+ years of experience in Spring Boot, REST APIs, and microservices. Strong in backend performance optimization and system reliability, with experience leveraging AI-assisted tools to accelerate development and improve code quality.

EDUCATION

Vignan's Lara Institute of Technology and Sciences — **Vadlamudi, India**
B.Tech in Electronics and Communication Engineering — *Aug. 2019 – May 2023*

EXPERIENCE

Java Developer — **Nov 2023 – Present**
Tata Consultancy Services (TCS)

- Developed scalable backend services using Java and Spring Boot, improving system reliability and maintainability across enterprise applications.
- Leveraged GitHub Copilot and coding agents to generate backend APIs and accelerate development workflows.
- Validated AI-generated code to ensure performance, correctness, and seamless system integration.
- Designed and implemented RESTful APIs supporting concurrent requests and efficient service-to-service communication.
- Reduced API response latency by optimizing SQL queries and improving backend data processing workflows.
- Performed root cause analysis on production issues and implemented fixes, improving system stability and reducing recurring failures.
- Worked on microservices-based architecture, enhancing scalability and enabling modular system design.
- Optimized backend workflows to efficiently handle concurrent user requests and improve overall application performance.
- Collaborated with cross-functional Agile teams to deliver features end-to-end with a focus on code quality and timely delivery.
- Used Git for version control and actively participated in code reviews to maintain clean, maintainable codebase.
- Gained exposure to Docker-based deployments and cloud environments for scalable backend system development.
- Used Docker for containerization and gained exposure to Kubernetes for deployment and orchestration of services.

PROJECTS

E-Commerce Backend API | *Spring Boot, Hibernate, SQL*

- Built backend services for managing products and orders using REST APIs.
- Improved response time by 30% through query optimization and efficient database design.
- Designed modular backend components improving maintainability and extensibility.

Microservices Order Management System | *Spring Boot, JPA, Docker*

- Designed microservices-based architecture with REST communication for modular and scalable system design.
- Containerized services using Docker to enable consistent deployment and environment portability.
- Improved system scalability by decoupling services and optimizing inter-service communication.

Employee Management System | *Java, Spring Boot, MySQL*

- Developed backend APIs and business logic modules supporting enterprise operations workflows.
- Designed and optimized SQL queries and stored procedures for efficient data processing.
- Integrated backend services with frontend applications using REST APIs for seamless data flow.
- Resolved production issues and improved system performance through debugging and optimization.

TECHNICAL SKILLS

Programming: Java, SQL, Python
AI Tools: GitHub Copilot, GitHub Coding Agent, Prompt Engineering
Frameworks: Spring Boot, Hibernate, JPA
Backend: REST APIs, Microservices
Databases: MySQL, SQL Server, Query Optimization
Tools: Git, Maven, Docker, Kubernetes, Postman
Concepts: OOP, Data Structures, Debugging, System Design Basics, Performance Optimization

CERTIFICATES

- Programming for Everybody (Python) | Coursera
- Python Data Structures | Coursera
- Using Databases with Python | Coursera
